

Your smile
is our concern

The dental office

Dr Pascal Gerber is a graduate of both, Swiss medical and dental school and he is currently the head director and owner of the White Groupe that owns 10 dental offices and clinics in Switzerland.

He's focusing on making the Crans-Montana office (Dentalps) and the Montreux clinic (White Montreux) to be specialized in cosmetic and esthetic dental work.

In order to bring a maximum of comfort and convenience to his patients, the office in Crans-Montana will adapt the opening hours to the patient's needs or desires.

Dr Gerber will use a dental scanner to take a digital impression of the mouth. No conventional impression material will be used.

YOUR
NEW SMILE
IN ONE DAY

Aesthetic and durable porcelain veneers are the best solution to improve your smile

The process

The first stage of the procedure is to prepare the teeth with a very conservative approach. Sometimes no preparation is required but if so, in order to create the space for proper veneer sitting, a thin layer (about 0.3-0.5 mm) of the enamel will be removed. Since the thickness of natural enamel is usually 1 to 1.5 mm, the remaining layer will still be protecting the tooth.

Then a digital scan will take the impression (no impression material used) for fabrication of the veneers in the dental laboratory.

The next day the porcelain veneers will be bonded into the mouth if the quality and the aesthetic criteria are validated.

If corrections or modifications are needed they will be done within the next 12 hours.

The laboratory

Since porcelain veneers and/or crowns are made by a dental laboratory located apart from the dentist's office, a period of one to two weeks is usually required to make them. Our laboratory will provide you with a minimum 24 h service on your schedule in order for you not to lose any golf or ski time.

Thierry Bestenheider is our 35 year experienced Swiss dental technician who has, before opening his own business, worked in the world famous Da Vinci Dental Studios in Los Angeles (1985-1990), laboratory of the stars and collaborated with the Paris Dental Clinic in Abu Dhabi for 15 years.

Experienced in cosmetic dentistry since 1985.

Veneers are thin semi-transparent porcelain shells permanently bonded to the teeth.

They are a great cosmetic alternative for a variety of dental conditions such as:
Stained, chipped, crooked or just unesthetic teeth.
